

KIRCHHOFF Automotive Energy Management Policy

KIRCHHOFF Automotive is a family-owned company. The current leadership represents the fourth generation of the family. As a global leader in the development and supply of best-in-class structures for vehicle bodies and chassis, we offer body solutions that make tomorrow's mobility environmentally friendly and safe.

In the management, planning, and conducting our business activities, we are committed to sustainable development and economic growth through the efficient consumption and use of energy across the organization.

KIRCHHOFF Automotive sets out the guidelines for improving energy efficiency in both a global and local environment. Our business model takes into account factors arising from the organization's context and decisions in terms of stakeholder needs and expectations, the achievement of company objectives, and the integration of the energy management system.

KIRCHHOFF Automotive commits to the continuous improvement of production and supporting processes through the monitoring of Energy Performance Indicators, the acquisition of energy-efficient products and services, as well as the design of technological improvements that are opportunities to improve the organization's energy performance. This commitment is reflected in our pursuit and maintenance of certification to the international Energy Management Standard ISO 50001, and in ensuring that we consistently identify and comply with all legal and other applicable requirements related to energy efficiency, use, and consumption.

KIRCHHOFF Automotive defines, establishes, and documents Energy Performance Indicators and objectives to monitor, measure, and continuously improve energy performance across all its activities, ensuring effective and efficient energy use throughout its processes.

KIRCHHOFF Automotive is committed to the continual improvement of the Energy Management System and the enhancement of energy performance, as well as to ensuring the availability of information and resources necessary to achieve the objectives and targets defined in the energy management programs.

Employees are provided with training and development opportunities to ensure they possess the necessary competencies to perform their duties effectively, thereby contributing to the improvement of the organization's energy performance and its sustainable development. This policy is communicated to all employees and is made publicly available to all interested parties.
